Profile Summary

Full-stack developer with solid experience in the MERN stack and strong JavaScript skills. I specialize in building fast, scalable, and reliable web applications using modern technologies. I focus on writing clean, maintainable code and creating smooth, user-friendly experiences. I enjoy breaking down complex problems and finding efficient solutions. I'm always learning, adapting, and staying updated with new tools and trends. I'm eager to bring value to a forward-thinking team and contribute to building innovative digital products.

Skills

Programming Languages:	JavaScript, TypeScript
Back End Development:	Node.js, Express.js, Clean Architecture, MVC, RESTful API Design
Front End Development:	React.js, Redux, Tailwind CSS, HTML, Bootstrap, CSS
Database:	MongoDB, Firebase
Tools:	Git, GitHub, Postman, Figma
Familiar With:	Docker, PostgreSQL

Projects

LittleHope | Kid's Fashion Brand: [Frontend](#) | [Backend](#) | [LiveLink](#)

Little Hope is a modern kids' fashion e-commerce platform built using the MERN stack. The application is designed with a mobile-first approach and provides a seamless shopping experience with a fully responsive UI and scalable backend architecture.

- **User Features:** Implemented OTP-based email verification and a smooth, user-friendly order placement flow to enhance overall user experience.
- **Security Measures:** Integrated secure authentication using JWT and OTP-based verification with Nodemailer, ensuring safe user access.
- **Admin Panel:** Developed a comprehensive admin dashboard for managing products, orders, users, and coupons with full control over the platform.
- **Image Management:** Utilized Cloudinary for efficient image upload, storage, and optimization.
- **Performance Optimization:** Designed clean and efficient APIs with proper state management ensuring smooth performance and reduced load time.
- **Responsive Design:** Built using Tailwind CSS with a mobile-first approach, ensuring compatibility across all devices.
- **Deployment:** Deployed both frontend and backend on Vercel for fast and reliable hosting.

Technologies: MERN Stack (MongoDB, Express.js, React.js, Node.js), Redux Toolkit, Tailwind CSS, JWT, Cloudinary, Nodemailer, Axios, Vercel, Clean Architecture, Git

Thanaf Watches is a full-featured e-commerce platform built for selling watches online. The application delivers a seamless shopping experience with a responsive design, secure payment integration, and a powerful backend system for managing users, orders, and products.

- **User-Friendly Features:** Developed core functionalities including Add to Cart, Wishlist, smooth checkout process, and secure payments using Razorpay.
- **Authentication & Security:** Implemented secure user authentication using Express Session with OTP verification via Nodemailer, ensuring reliable session handling..
- **Advanced Search & Filters:** Built dynamic product filtering and sorting features to enhance product discovery and user experience.
- **Order Management System:** Designed a complete order lifecycle system including order placement, tracking, and management.
- **Admin Dashboard:** Created a dedicated admin panel for managing products, users, orders, coupons, and referral systems (Refer & Earn).
- **Performance & UI:** Developed a fully responsive UI using Bootstrap, ensuring smooth performance across devices.

Technologies: Node.js, Express.js, MongoDB, EJS, HTML, CSS, Bootstrap, Razorpay, Express Session, Git Nodemailer, Multer

Mini Projects

•**Crypto Price Tracker: [EJS, Coingecko API]**

Built a real-time cryptocurrency tracking application that fetches and displays live prices, market trends, and coin details using external APIs. Implemented dynamic UI rendering with EJS and server-side logic using Node.js.

•**Casio F91W: [Antigravity IDE, Flow, Whisk]**

[Live Link](#)

Built an animated landing page for the Casio F91W watch using React.js, featuring smooth transitions with Flow, designed in Antigravity IDE, and enhanced with AI-generated visuals from Whisk, delivering a responsive and visually engaging user experience.

•**Coffee House: [React.js]**

[Live Link](#)

Developed a coffee shop landing page using Antigravity IDE, Flow, and Whisk, focusing on clean design, smooth animations, and a responsive user experience.

•**Todo App: [React.js]**

Developed a task management application implementing CRUD operations (Create, Read, Update, Delete). Built a responsive UI using React.js with efficient state management.

Education

MERN Stack Development

Brototype

2023 - 2024

Higher Secondary (Biology Science)

KPES HSS Kayakkody

2020 - 2022
